

Valtek® Valdisk™ High-Performance Butterfly Control Valve

Experience In Motion

Maintain process integrity and ensure a smooth production flow

Control valves play a critical role in process applications by maintaining process integrity and ensuring a smooth production flow. They assure process variables remain close to the desired setpoint and facilitate improvements in process productivity, plant uptime and employee safety.

Control valve reliability is even more vital in demanding, high-cycle applications — such as pressure swing adsorption (PSA) and air separation in oil and gas refineries and chemical refining — that experience more than 200,000 cycles per year.

Operators in these and other industries are challenged with selecting durable control valves that deliver reliable performance, high control and throttling accuracy while minimizing operating, maintenance and ownership costs.

The Valtek Valdisk control valve from Flowserve is a high-performance butterfly valve designed to improve uptime and minimize operating and ownership costs. It is engineered to deliver bubble-tight shutoff, reliable control and throttling accuracy in a variety of standard and high-cycle applications.

Improved uptime

The Valdisk control valve features a soft seat designed to provide long-lasting, tight shutoff in both flow directions. This allows for optimum leakage resistance in demanding applications to minimize downtime and improve plant productivity.

Lower maintenance costs

The double-offset disc design minimizes seat and disc wear as well as leakage, which extends seat life and reduces maintenance costs.

High-performance throttling

The Valdisk control valve has a high-thrust cylinder actuator coupled with an eccentric-cammed disc, which enables unmatched, high-performance throttling.

Flowserve is everywhere you are

Flowserve manufacturing sites and Quick Response Centers are located all around the world, so customers have on-the-spot availability for technical support and experienced field service technicians.

Wherever your operations are, Flowserve is there to help you be successful.

Logix™ 3800 positioner

Digital positioner for high reliability and simplified installation with an innovative, one-button, quick-calibration feature

Piston cylinder actuator

High thrust for high-performance throttling, air pressure up to 150 psi (10.3 bar)

Clamped/splined actuator lever

Eliminates lost motion between shaft and actuator to improve throttling control

Actuator and positioner interface

A spring-biased linkage provides repeatability and reduces hysteresis.

Stroke stops

Adjustable stroke stops prevent excessive rotation to avoid shaft damage.

Splined shaft end

One-piece, splined shaft end provides a tight connection between shaft and actuator to improve throttling control.

Shaft retention

Anti-blowout protection for safety compliance to industry standards

Pinned shaft to disc

Tapered pins provide tight connection for excellent control without the need to drill the shaft.

Packing options

Low-emissions for variety of applications, complying with industry standards

Excellent shut-off

Soft seat/jam-lever toggle (Class VI) and metal seat (Class IV) provide reliable, long-life, shut-off capability.

Heavy-duty end post

Robust design for safety and easy maintenance

Seats

Soft seat

Unique seat design utilizes the pressure drop across the valve to help energize the soft seat to bubble-tight shutoff in either flow direction, including alternating flow applications. This is done in such a way that seating capacity is increased as differential pressure is increased.

ANSI/FCI 70-2 Class VI shutoff.

Figure 1: Soft seating arrangement

Metal seat

Metal seats are used for applications involving temperatures higher than those permitted by the soft seat. The design incorporates a highly flexible lip, which assures full-circle contact between the seat and disc when the valve is closed.

ANSI/FCI 70-2 Class IV shutoff.

Figure 2: Metal seating arrangement

Dual fire-safe seat

This seat arrangement incorporates the unique design of the soft seat for tight shutoff plus a metal seat that provides full seat contact in the event a fire damages the soft seat.

ANSI/FCI 70-2 Class VI shutoff.

Figure 3: Dual fire-safe seating arrangement

Specifications and certifications

Options	ASME	DIN
Sizes	NPS 2 to 60	DIN 80 to 600
Pressure classes	ASME CL 150 to 1500	PN 10 to 40
End connection	ASME 16.5 and ASME B16.47	EN 1092-1 raised face
Body materials	WCC, CF8M; alloys upon request	1.0619, 1.4408; alloys upon request
Face to face	API 609 (Valtek standard for large sizes)	EN 558 Series 20
Body style	Lug, wafer (flangeless), double-flanged	Lug, wafer
Temperature	-196°C to 427°C (-320°F to 800°F)	
Packing	PTFE V-ring, braided PTFE, graphite braid, SureGuard XT, SafeGuard	
Packing type	Single, twin, vacuum, live-loaded, fire-safe	
Fire safety	API 607, ISO 10497	
Fugitive emissions	ISO 15848-1	
Shut-off	ANSI/FCI 70-2: Class IV (metal seat) and VI (soft seat)	

Design standards

ASME (B16.34, B16.10, B16.25), PED, DIN, CRN, ISO, NACE, EN

Test standards

ASME B16.34, ANSI/FCI 70-2

Certifications/approvals

ISO 9001, PED, CRN, TRCU, SIL

Actuation and instrumentation

VR spring cylinder rotary actuator

The Flowserve VR spring cylinder rotary actuator combines high torque and pneumatic stiffness with excellent throttling capabilities. These characteristics are designed into a lightweight, rugged and compact assembly, making this actuator an ideal choice for quarter-turn applications.

Limitorque® LPS pneumatic Scotch yoke actuator

The Limitorque LPS actuator is ideal for medium or large valve actuation and any application requiring robust design, long service life and high-speed operation. Its modular construction allows easy on-site maintenance without special tools or valve removal. The actuator's 25-year design life and maintenance intervals of up to six years lower its total cost of ownership.

Logix 3800 digital positioner

Compatible with linear and rotary valves and actuators, the Logix 3800 digital positioner delivers high reliability in harsh environments. It provides unparalleled modularity and versatility within a single unit. Its ability to handle double- or single-acting, linear and rotary applications reduces inventory and operating costs. An innovative, one-button, quick-calibration feature simplifies installation.

Flowserve Corporation has established industry leadership in the design and manufacture of its products. When properly selected, this Flowserve product is designed to perform its intended function safely during its useful life. However, the purchaser or user of Flowserve products should be aware that Flowserve products might be used in numerous applications under a wide variety of industrial service conditions. Although Flowserve can provide general guidelines, it cannot provide specific data and warnings for all possible applications. The purchaser/user must therefore assume the ultimate responsibility for the proper sizing and selection, installation, operation, and maintenance of Flowserve products. The purchaser/user should read and understand the Installation Instructions included with the product, and train its employees and contractors in the safe use of Flowserve products in connection with the specific application.

While the information and specifications contained in this literature are believed to be accurate, they are supplied for informative purposes only and should not be considered certified or as a guarantee of satisfactory results by reliance thereon. Nothing contained herein is to be construed as a warranty or guarantee, express or implied, regarding any matter with respect to this product. Because Flowserve is continually improving and upgrading its product design, the specifications, dimensions and information contained herein are subject to change without notice. Should any question arise concerning these provisions, the purchaser/user should contact Flowserve Corporation at any one of its worldwide operations or offices.
